

TABLE OF CONTENTS

PREFACE	vii
1. Introduction	1
1.1 Background and aim of study	1
1.2 Theory and methodology	2
1.3 Definitions of the engineering industry	5
1.4 Outline of the study	12
2. An Introduction into the Theoretical Framework	15
2.1 Introduction	15
2.2 The trade specialization concept	16
2.3 The rôle of the number 2	22
2.4 The factor abundance definition	29
2.5 The factor intensity definition	30
2.6 Outline of the empirical methodology	34
3. Sweden's Factor Abundance and Comparative Advantage	39
3.1 Introduction	39
3.2 The Swedish endowment of human and non-human capital	39
3.3 Swedish relative factor prices	41
3.4 The factor use in Swedish trade	44
3.5 Conclusions about Sweden's factor abundance	47
4. The Inter-Industry Pattern of Swedish Engineering Trade Specialization in 1970	49
4.1 Introduction	49
4.2 Measures of engineering trade specialization	49

4.3	The independent variables	56
4.4	Possible determinants of the inter-industry specialization patterns	65
4.4.1	Hypotheses	65
4.4.2	Regression results	66
4.4.3	The possible rôle of tradability differences	69
4.5	Conclusions and hypotheses for subsequent chapters	73
5.	Heterogeneous Industries, Intra-Industry Specialization and the Analysis of Inter-Industry Specialization	77
5.1	Outline of the analytical problems	77
5.2	Two sources of measurement errors for heterogeneous industries	78
5.3	A technology proxy	82
5.4	Inter-industry specialization among homogeneous industries	82
5.4.1	Measuring the degree of heterogeneity	82
5.4.2	Inter-industry specialization for homogeneous industries	86
5.5	Further analysis of measurement errors	87
5.5.1	Errors due to dissimilar aggregation weights	87
5.5.2	Further regression results	94
5.6	Summary and conclusions	94
6.	Trends in Sweden's Inter-Industry Specialization 1960-1970	97
6.1	Outline of the analytical problems	97
6.2	The changing specialization pattern 1960-1970	98
6.3	Is there a systematic negative specialization trend?	98
6.4	The analytical framework	105
6.5	The decreasing tariffs	106
6.6	Technological change	107

Table of Contents

xi

6.6.1	The development of factor intensities	108
6.6.2	A method for studying technological change	109
6.6.3	The regression results	110
6.6.4	Conclusions on the nature of technological change	115
6.7	Factor accumulation	116
6.8	A regression analysis of the change in inter-industry specialization	117
6.8.1	Regressions on the changing net export ratio	117
6.8.2	Regressions on the changing home market shares	121
6.8.3	Further regression results	123
6.9	Summary and conclusion	124
7.	Factor Market Barriers and Other Barriers to Entry and Exit	133
7.1	Outline of the analytical problems	133
7.2	Delineating specialization measures for categories of firms	134
7.3	Barriers to entry and exit	137
7.3.1	Factor market barriers	137
7.3.2	Commodity market barriers	142
7.3.3	The norms of comparison	144
7.4	A regression analysis of the production adjustment of permanent producers	146
7.5	A regression analysis of adjustment through exits	149
7.6	A regression analysis of adjustment through entries	152
7.7	Conclusions	156
8.	The Commodity Group Specialization Pattern of 15 Industrial Countries in 1970	163
8.1	Outline of the analytical problems	163
8.2	Methodology	163

8.2.1	The technology proxy and its utilization	164
8.2.2	Measures of intra-commodity group specialization and technological heterogeneity	167
8.2.3	Are technology differences internationally similar?	169
8.3	The intra-commodity group patterns of specialization	170
8.4	The inter-commodity group pattern of specialization	173
8.4.1	The specialization pattern of the US, Japan, West Germany and Great Britain	176
8.4.2	The specialization pattern of ten other OECD-countries	179
8.4.3	The Swedish commodity group specialization	182
8.5	Conclusions	187
9.	Trends in Commodity Group Specialization of 14 Industrial Countries 1964-1970	191
9.1	Outline of the analytical problems	191
9.2	Changes in total engineering specialization of industrial countries	192
9.3	The existence of negative specialization trends at the commodity group level	193
9.4	Specialization trends within commodity groups	199
9.5	Trends in inter-commodity group specialization patterns	206
9.5.1	Outline of the methodology	206
9.5.2	Trends in specialization for USA, Japan, West Germany and Great Britain	211
9.5.3	Trends in specialization for Canada, France and Italy	217
9.5.4	Trends in specialization for six small industrial countries	220
9.5.5	The Swedish trends in specialization	223
9.6	Conclusions	226

Table of Contents

xiii

10. Summary and Conclusions	231
10.1 The Swedish engineering trade patterns	231
10.2 Engineering trade patterns of other industrial countries	239
10.3 Theoretical and methodological conclusions	242
10.4 Possible directions of further studies	245
Appendix A. The Choice of Technology Measures and Its Possible Impact on the Results	249
Appendix B. The Ton Price as a Measure of Technological Differences between Engineering Products	257
Appendix C. Basic Data	263
REFERENCES	275
INDEX	283

LIST OF TABLES

1:1. Some measures on the size of the Swedish engineering industry and its subindustries	7
1:2. Engineering products in Swedish trade 1970	12
4:1. Some measures of trade specialization by industries in 1970	51
4:2. Factor intensities in 39 engineering industries in 1970	58
4:3. Regressions on the net export ratio and the home market share of 1970	67
5:1. Mean value, standard error and relative standard error of commodity ton prices in 34 engineering industries 1970	84
5:2. Regressions on net export ratios of homogeneous, heterogeneous and all engineering industries 1970	87
5:3. Correlation with the commodity ton prices for 32 industries 1970	89
6:1. Measures of the changing industry specialization 1960-1970	99
6:2. Indices of technical personnel and capital intensities in Swedish engineering industry 1954 and 1968	108
6:3. Regressions on the 1968 factor intensity index	111
6:4. Regressions on the change in net export ratios of engineering industries 1960-1970	118
6:5. Regressions on the change in home market shares of engineering industries 1960-1970	122
6:6. Regressions on the net export ratio of 1960	124
6:7. Further regressions on the changing net export ratio in 1960-1970	125
7:1. A correlation matrix between measures of factor and commodity market barriers	146
7:2. Regression analysis of specialization trends, in foreign trade and for permanent firms 1959-1968	147
7:3. Regression analysis of exits in 1959-1968	150
7:4. Regression analysis of entries in 1959-1968	153

List of Tables

xv

8:1.	The regression relationships between the export ton price of a country and that of OECD-Europe in 1970	171
8:2.	Proportion of commodity groups with export ton price ratios above 1.0 in nine industrial countries 1970	172
8:3.	Regressions on the ton price ratios in 1970 exports of nine industrial countries	174
8:4.	Trade with engineering products of 15 industrial countries in 1970	175
8:5.	Regressions on the net export ratios and the world export shares of the U.S., Japan, West Germany and Great Britain in 1970	178
8:6.	Regressions on the net export ratios and world market shares of ten other OECD-countries in 1970	180
8:7.	Regressions on the net export ratio, the world market share and the home market share of Sweden in 1970	183
8:8.	Correlation matrix between dependent and independent variables of the regressions in table 8:7	186
9:1.	Aggregate net export ratios and world market shares of industrial countries' engineering trade	192
9:2.	Regression between changes in specialization 1964-1970 and the 1964 specialization for 14 industrial countries	197
9:3.	Correlation coefficients between specialization changes of 14 industrial countries and the corresponding changes of 4 large countries	200
9:4.	Regressions on the change of the ton price ratio of nine industrial countries 1964-1970	202
9:5.	Regressions of P_E on P_k for nine industrial countries (k) in 1964 and in 1970	204
9:6.	The percentage proportion of commodity groups with ton price ratios above 1.0 in nine industrial countries 1964 and 1970	205
9:7.	A correlation matrix for certain independent variables of the regression analysis	210
9:8.	Regressions on the changing net export ratios and world export shares 1964-1970 and on their 1964 levels. USA and Japan	212
9:9.	Regressions on the changing net export ratios and world export shares 1964-1970 and on their 1964 levels. West Germany and Great Britain	215

9:10.	Regressions on the changing net export ratio 1964-1970 and on its 1964 level	219
9:11.	Regressions on the changing net export ratios or world market shares and on their respective 1964 levels. Belgium, the Netherlands, Norway, Denmark, Austria and Switzerland	221
9:12.	Regressions on changes in Swedish net export ratios and world export shares 1964-1970 and on their 1964 levels	224
9:13.	Regressions on the change in Swedish home market shares 1964-1970 and on its 1960 level	227
10:1.	Results of the study showing negative specialization trends in Swedish engineering trade	235
A:1.	Regressions on the 1970 specialization utilizing un- or low-skilled workers in the denominators of the factor intensities	254
A:2.	Regressions on the 1970 specialization utilizing value added in the denominators of the factor intensities	254
B:1.	Regressions on the export and import ton prices of 21 engineering industries in 1970	261

LIST OF FIGURES

3:1	Total wage costs per hour in the manufacturing industry in certain countries as percentages of the corresponding Swedish figures 1960-1970	42
4:1	Actual and estimated (from regression 5, table 4:3) net export ratios of engineering industries in percent	70
4:2	Actual and estimated (from regression 9, table 4:3) home market shares in percent	71
6:1	The relationship between the 1960 levels and 1960-1970 changes of the net export ratios of engineering industries	103
6:2	The relationship between indices of the technical personnel intensities of 1968 and 1959	113
6:3	The relationship between indices of horsepower/employee in 1968 and 1959	114
9:1	Regression lines for 14 industrial countries between changes in net export ratios 1960-1970 and the 1964 net export ratio	195
9:2	Regression lines for 13 industrial countries between changes in world export shares 1964-1970 and the 1964 world export shares	196
10:1	Specialization trends in 1953-1974 for three periods and for 27 commodity items in the engineering sector	238
