

## CONTENTS

<i>Preface</i>	<i>page xv</i>
<i>Participating institutes and their abbreviations</i>	xvii
<i>Symbols used in the tables</i>	xvii
<b>I INTRODUCTION</b>	<b>I</b>
<i>by G. F. Ray</i>	
The advance of technology	1
Diffusion and technological progress	4
New technology and the individual firm	6
Measures of diffusion	8
The pattern of the diffusion process	8
The inquiry	10
CHART	
1.1 The internal process of diffusion within a firm	7
<b>2 SUMMARY OF THE INTERIM REPORT</b>	<b>16</b>
<i>by G. F. Ray</i>	
The significance of differences between countries	16
Characteristics of individual processes	20
The influence of company structure	21
TABLE	
2.1 Diffusion of the ten selected processes	17
CHARTS	
2.1 Relations between introduction and speed of diffusion (five processes)	18
2.2 Aggregate relation between introduction and speed of diffusion	19
<b>3 NUMERICALLY CONTROLLED MACHINE TOOLS</b>	<b>22</b>
<i>by A. Gebhardt and O. Hatzold</i>	
Introduction	22
The technology	23
The operation of numerical control	23
The advantages	24
A theory of diffusion and numerical control	26
The objects of this study	28
The inquiry	28
The diffusion of numerically controlled machines	31
The level of diffusion	31
The speed of diffusion	34
Factors influencing diffusion	38

General factors: macro-economics	<i>page</i> 39
Specific factors at company and plant level:	
micro-economics	45
Observations	54
Summary and conclusions	55
TABLES	
3.1 Sizes of sample firms	29
3.2 Coverage of the samples	30
3.3 National stocks of numerically controlled machines	31
3.4 Levels of diffusion, end-1969	31
3.5 Numerically controlled machines as a proportion of all machine tools	31
3.6 Pieces worked by numerical control, West Germany	31
3.7 Numerically controlled machines by size of firm	31
3.8 First installations of numerically controlled machines	31
3.9 Growth of the stock of numerically controlled machines	31
3.10 Distribution of numerically controlled machine tools in the major industries	4
3.11 Unit costs of production on numerically controlled machines	4
3.12 Production structures of the sample firms	4
3.13 Batch-sizes in firms using numerical control	5
3.14 Attitudes to innovations among the sample firms	5
3.15 Factors affecting the diffusion of numerically controlled machines	5
CHARTS	
3.1 Advantages of numerically controlled machines	2
3.2 Growth of the stock of numerically controlled machines used by the sample firms	3
3.3 The decision gap	3
3.4 The relation between labour costs and the diffusion of numerical control, 1969	4
3.5 First information on numerically controlled machines	4
3.6 Minimum production costs on various machines in relation to batch-size and number of orders	4
4 SPECIAL PRESSES IN PAPER-MAKING	5
<i>by S. Håkanson</i>	
Special presses	5
The diffusion model	5
The analysis of diffusion	5
Formulation of the variables	6
Empirical data	6
The decision process	6
First information	6
First adoption	7
Inter-firm diffusion	7
An exploratory approach	7
An econometric approach	8
Diffusion within companies	8
Diffusion at plant level	8
Diffusion at machine level	9

CONTENTS

ix

An inter-country comparison	<i>page</i> 93
Some explanations of country differences	94
Different types of special presses	97
Institutional variables	98
Summary	103
TABLES	
4.1 National paper and board industries, 1966, and coverage of the samples	67
4.2 Respondents among the companies approached	68
4.3 Timelags between first and last receipts of information	70
4.4 Sources of information: frequency in replies	71
4.5 Average year of first information by categories of adopters	74
4.6 Sample companies by categories of adopters	76
4.7 Average pay-off periods by categories of adopters	77
4.8 Self-financing ratios by categories of adopters, Sweden and the United Kingdom	77
4.9 Information variables by categories of adopters	79
4.10 Company attitudes to four other new techniques by categories of adopters	81
4.11 Growth in machine productivity by categories of adopters	81
4.12 Profit rates by categories of adopters, Sweden and the United Kingdom	82
4.13 Average company size by categories of adopters	83
4.14 The influence of four selected variables on the date of adoption of special presses by a company	85
4.15 Plants and paper machines in the sample companies	87
4.16 First introduction of special presses at plant level and machine profitability	91
4.17 Timelags between first and second installation and profitability, Italy, Sweden and the United Kingdom	91
4.18 Average annual rates of increase of diffusion during the growth stage	94
4.19 Average pay-off periods for machines making different grades of paper	100
4.20 Average annual output of paper machines	102
4.21 Average years when paper machines were installed	103
CHARTS	
4.1 Diffusion of first information on special presses	70
4.2 Diffusion of first adoption of special presses	72
4.3 Diffusion of information and adoption compared	73
4.4 Diffusion of special presses at the levels of companies, plants and machines	88
4.5 Maximum, actual and minimum diffusion of special presses at the plant level	89
4.6 Paper machines in each pay-off interval equipped with special presses, Sweden and the United Kingdom	92
4.7 Total paper and board output on machines with special presses and on new machines	95
4.8 Sources of information from abroad and years of first adoption	97
4.9 Output with special presses of different grades of paper	99
4.10 Output with special presses in companies of different sizes	101
5 TUNNEL KILNS IN BRICK-MAKING	105
<i>by L. A. Lacci, S. W. Davies and R. Smith</i>	
Brick-making and the tunnel kiln	105
The inquiry	108
The productivity of the tunnel kiln	109

Technical factors impeding diffusion	<i>page</i> 119
The diffusion process	118
The observed time-path	118
A model of diffusion	121
A test of the diffusion model	122
Inter-country differences	128
Inter-firm differences	140
Conclusions	144
TABLES	
5.1 Coverage of the samples	100
5.2 Diffusion among the sample firms, 1969	113
5.3 Factors hindering adoption among partial adopters and non-adopters	112
5.4 Diffusion with respect to technological ceilings, 1969	117
5.5 The time-paths of diffusion	120
5.6 Least squares analysis of diffusion over time	120
5.7 Uncertainty of demand for bricks, 1954-69	130
5.8 Growth in output and investment, 1965-9	133
5.9 Age distribution of tunnel kilns, 1955	133
5.10 Shares of solid and liquid fuels in total primary energy consumption	133
5.11 Anticipated and actual benefits from the adoption of tunnel kilns	133
5.12 Purposes in building new tunnel kilns	137
5.13 Diffusion of tunnel kilns and growth in output of bricks	138
5.14 The influence of various factors on diffusion in each country	138
5.15 Adopters and non-adopters: size of firms	143
5.16 Adopters and non-adopters: growth of firms	143
5.17 Adopters and non-adopters: the average age of kilns	143
CHARTS	
5.1 Movements of factor shares, 1964-9, among adopters and non-adopters, Italy and West Germany	110
5.2 Productivity changes, 1960-9, among adopters and non-adopters, West Germany	113
5.3 The demand for bricks, 1954-9	116
5.4 The time-paths of diffusion	119
5.5 A possible distribution of firms with respect to their expectations at the date of first adoption	122
6 THE BASIC OXYGEN STEEL PROCESS	146
<i>by J. R. Meyer and G. Herregat</i>	
Steelmaking technology and the history of the basic oxygen process	146
Diffusion of the basic oxygen process	152
The cost advantages of the basic oxygen process	158
Starting date	158
Cost-advantage analysis	159
Models and samples	162
Models	162
Samples	165
Measuring management motivation	166
Techniques of analysis	166
The principal components	171

## CONTENTS

xi

Empirical results: investment behaviour	<i>page</i> 176
Empirical results: adoption of the basic oxygen process	181
National comparisons	181
Individual firm regressions	188
Summary and some final observations	192
Appendix	195
Statistical sources	195
Constructed data	197

## TABLES

6.1 National diffusion coefficients, 1956-69	154
6.2 Ratios of changes in oxygen process capacity to changes in total capacity plus changes in oxygen process capacity, 1959-69	157
6.3 Sign patterns and rank orders of managerial profiles	170
6.4 Principal components: factor loadings on financial and productivity ratios	172
6.5 Average relative aggressiveness scores for firms, 1962-4	176
6.6 Determinants of steel industry investment, national cross sections, 1961-6	177
6.7 Determinants of steel industry investment, national time series	179
6.8 Determinants of individual firms' investment, 1963-6	180
6.9 Determinants of change in oxygen process capacity, national cross sections, 1962-7	182
6.10 Determinants of change in oxygen process capacity, national time series	185
6.11 Determinants of change in oxygen process capacity, national cross sections, 1961-6 (two-stage least squares estimates)	187
6.12 Determinants of change in oxygen process capacity, pooled sample of all national data, 1962-7	188
6.13 Determinants of individual firms' proportions of oxygen process capacity, 1968	189

## CHARTS

6.1 Shares of basic oxygen steel in total crude steel output	153
6.2 Basic oxygen process production by countries, 1956-9	155
6.3 Total steel output by countries, 1956-69	156

7 FLOAT GLASS	200
<i>by G. F. Ray</i>	
Making flat glass	200
The float process	200
Accountability: one aspect of innovation	202
The industry	203
The inquiry	204
Diffusion of the new technique	204
Factors influencing diffusion	209
Information	209
Licensing policy	210
Capital	210
Size	211
Management	212
Summary and conclusions	214

	TABLES	
7.1	The output of flat glass	page 203
7.2	Licence agreements and float plants in operation, early 1971	205
7.3	Gestation period for building a float plant	208
	CHARTS	
7.1	Two methods of making polished plate glass	201
7.2	Measures of diffusion of the float process	206
7.3	Float glass output	207
7.4	Gestation period from the licence agreement to commissioning the first float plant	209
8	THE APPLICATION OF GIBBERELIC ACID IN MALTING	 215
	<i>by G. F. Ray</i>	
	Gibberellic acid	215
	The malting industry	216
	Innovation and adoption	217
	The inquiry and its findings	221
	Legal regulations	221
	Information	222
	Profitability	224
	Investment	225
	The 'bandwagon' effect	225
	Management attitudes	226
	Size of firms	227
	Intra-firm diffusion	228
	Summary and conclusions	230
	TABLES	
8.1	Concentration in brewing industries: the ratio of enterprises to plants	216
8.2	Output and consumption of beer	217
8.3	The use of gibberellic acid	219
8.4	Least squares analysis: users and non-users in the United Kingdom	226
	CHARTS	
8.1	Sample companies in the United Kingdom using gibberellic acid	219
8.2	Shares of malt production treated with gibberellic acid	220
9	CONTINUOUS CASTING OF STEEL	232
	<i>by W. Schenk</i>	
	Introduction	232
	The continuous casting of steel	232
	Historical development	234
	Austria	234
	France	235
	Italy	235
	Sweden	235
	United Kingdom	236

CONTENTS

xiii

United States	<i>page</i> 236
West Germany	236
Economic aspects	236
The inquiry	238
The diffusion pattern	239
An informal model of diffusion	242
The analytical framework	242
Explanatory variables and their influence	244
Intra-firm diffusion	249
Summary and conclusions	250

TABLES

9.1 Coverage of the national samples	239
9.2 Continuous casting capacity as proportion of total crude steel capacity	240
9.3 Output of continuously cast steel as a proportion of total crude steel production	241
9.4 National capacities for continuous casting of steel	244
9.5 Technological ceilings: shares of crude steel production technically suited to continuous casting	245
9.6 Output of continuously cast steel as a proportion of crude steel production within the technological ceiling	246
9.7 The diffusion of continuous casting by process	247
9.8 Intra-firm diffusion among users of continuous casting, 1969	249

CHARTS

9.1 Operations in the production of semi-finished steel	233
9.2 Shares of continuously cast steel in total crude steel production	241
9.3 Continuous casting capacity, 1969, and the share of oxygen steel production, 1964	248

10 SHUTTLELESS LOOMS 251

*by R. J. Smith*

The technology	251
The inquiry	255
The diffusion pattern of shuttleless looms	257
Cotton and cotton-type textile industries in the six countries	263
Factors influencing inter-firm diffusion	267
Attitudes of non-adopters	268
Experience of shuttleless looms in operation	269
Relative costs of production	271
Other factors	273
Testing the hypotheses	276
Relative cost coefficients	276
The influence of other factors	280
Cross-section analysis	283
Conclusions	290

TABLES

10.1 Potential output of woven cloth on different types of loom	254
10.2 Respondents to the inquiry	255

10.3	Coverage of the samples	<i>page</i> 256
10.4	Adoption of shuttleless looms in the samples	257
10.5	Inter-firm and intra-firm diffusion of shuttleless looms, 1969	261
10.6	Intra-firm diffusion, 1969	262
10.7	Import content of consumption of woven cotton and cotton-type cloth	264
10.8	Output in the cotton and cotton-type weaving industry, 1969	264
10.9	Labour and loom productivity in the cotton and cotton-type weaving industry	265
10.10	Size distribution of firms in the cotton and cotton-type weaving industry	267
10.11	Non-users' consideration of shuttleless looms	268
10.12	Non-users' reasons for not installing shuttleless looms	269
10.13	Degree of standardisation of respondent firms	277
10.14	Competition from imports and warp-knitting, and reactions to it	281
10.15	Foreign connections of firms	282
10.16	Least squares analysis: sample of users and non-users	285
10.17	Least squares analysis including absolute size of firm: sample of users and non-users from Italy, Sweden, the United Kingdom and West Germany	286
10.18	Least squares analysis including profitability: sample of users and non-users	287
10.19	Least squares analysis: sample of users only	288
10.20	Correlations between characteristics of firms and their adoption of shuttleless looms	292
	CHARTS	
10.1	The time-path of diffusion among the sample firms	258
10.2	The adoption of shuttleless looms in each national sample	260
10.3	The reported advantages and disadvantages of shuttleless looms	270
10.4	Patterns of shift-working	280
10.5	Vertical integration, users and non-users	281
II	SUMMARY AND CONCLUSIONS	294
	<i>by L. Nabseth</i>	
	Introduction	294
	International differences in the diffusion of selected new processes	295
	Factors affecting the speed of diffusion	299
	First information	299
	Profitability or relative advantage	301
	Other economic variables	306
	Institutional circumstances	308
	Management attitudes	309
	Explaining diffusion differences between countries	311
	Were we starting the project now	315
	TABLE	
11.1	Size of firm and date of first information	301
	<i>List of works cited</i>	316
	<i>Index</i>	321
