

CONTENTS

FOREWORD	11
PREFACE	13
CHAPTER 1.	GENERAL INTRODUCTION AND SUMMARY 15
1.1	Aims 16
1.2	A reader's guide 17
1.2.1	A reader's guide to chapter 2 17
1.2.2	A readers' guide to chapter 3 18
1.2.3	A readers' guide to chapter 4 19
1.2.4	A reader's guide to chapter 5 24
1.3	Present shortcomings and future research 29
CHAPTER 2.	INSTITUTIONAL BACKGROUND AND STATISTICAL DATA 31
2.1	Definition of the population 31
2.2	Individual salary setting; central and local negotiations 33
2.3	Data collection and variable definitions 36
2.3.1	The SAF salary statistics 36
2.3.2	The salary statistics of the Swedish Association of Graduate Engineers as compared with the SAF statistics 44
CHAPTER 3.	LABOUR COMPOSITION AND MOBILITY 48
3.1	Descriptive methods for the analysis of changes in composition 48
3.2	Employment by sectors 55
3.2.1	Educational composition by industries 56
3.2.2	Composition by job and education 61
3.2.3	Age composition 66
3.3	Supply of labour from universities and schools 68
3.4	Some evidence on employment, leaving and promotion rates 70
CHAPTER 4.	AGE-EARNINGS PROFILES BY EDUCATION 77
4.1	Introduction and summary 77
4.2	A formal representation of an individual earnings path 78
4.3	Models of age-earnings profiles 83
4.3.1	A prototype model with salary increases dependent on active age 83
4.3.2	A model with salary increases dependent on active and physical age 87

	4.3.3	A special case	92
	4.3.4	Stochastic properties of the model	94
	4.3.5	Specification errors	103
	4.3.6	Estimation	110
	4.3.7	Some remarks on possible refinements	122
	4.4	Lifetime salaries and rates of return to education	125
	4.5	Introduction to a cross sectional analysis of earnings	129
CHAPTER 5.	A CROSS SECTIONAL ANALYSIS OF SALARY DIFFERENCES 133		
	5.1	Models and methods	134
	5.1.1	Basic features of the models	134
	5.1.2	The choice of constraints	139
	5.1.2.1	Formal properties of the constraints	139
	5.1.2.2	Four specific sets of constraints	148
	5.1.2.3	On the treatment of «empty cells»	158
	5.1.3	Estimation	159
	5.1.3.1	Least squares estimators	159
	5.1.3.2	Transformations from one set of estimates to another	161
	5.1.3.3	Estimation with many regressors	162
	5.2	Models and results	168
	5.2.1	Nominal or relative salary differences. Stochastic properties	171
	5.2.2	The choice of constraints. An empirical investigation	172
	5.2.3	Investigation of main effects	174
	5.2.4	Investigation of interactions	186
	5.2.5	The salary structure in some important jobs belonging to the technical, economic and administrative job families	197
	5.2.6	A comparison between Leavers, Pairs and Beginners	207
	5.2.7	Changes in the salary structure in the period 1957–1968	
APPENDIX A.	Models and estimates 215		
APPENDIX B.	Necessary and sufficient conditions for unique solutions in constrained linear models not of full rank 258		
APPENDIX C.	Some properties of least squares regression with incomplete models not of full rank 263		
REFERENCES	267		

FIGURES

- 1:1 Cohort and cross section profiles 20
- 2:1 2.3 million men in the labour force in 1960 32
- 2:2 The principle of statistical increments due to age 34
- 2:3 Arithmetic mean salary by age in 1970 (Sw.kr. per month) 47
- 3:1 Geometrical interpretation of measures of changes in level and mix 49
- 3:2 Geometrical interpretation of changes in mix 53
- 3:3 Degrees and certificates awarded 1951–1967 (cumulative scale) 69
- 4:1 Age-earnings profiles 84
- 4:2 Salary paths of one birth cohort with three labour market cohorts 91
- 4:3 Individual salary variability by physical age 101
- 4:4 Estimated cohort profiles by education for employees assumed to be born in 1930 119
- 4:5 Estimated cohort profiles for graduate engineers and high school engineers assumed to be born in 1930 120
- 4:6 Estimated cohort and cross section profiles for graduate engineer 121
- 5:1 Main effects in an additive model 148
- 5:2 Main effects in a model with interactions 150
- 5:3 Age-earnings profile of all men with at least high school education (model IX:H68) 178
- 5:4 Job level-earnings profile of all men with at least high school education (model IX:H68) 179
- 5:5 Age-salary profiles from model II:H68, with and without the job factor 184
- 5:6 Age-salary profiles from model VIIIa:H68, with and without the job factor 184
- 5:7 Educational effects of the models II and VIIIa, with and without the job factors in 1968 187
- 5:8 Interactions age \times job in model VIII:P64 192
- 5:9 Comparison between cost of living areas by education in model VII:P64 194
- 5:10 Comparison between cost of living areas by age in model VII:P64 195
- 5:11 Age-earnings profiles for the technical job families (model II:P64,3) and for the families commerce, finance and accounting (model VIIIa:P64,3) 198
- 5:12 Salary differences between cost of living areas in technical jobs (model II:P64,3) and in commerce, finance and accounting (model VIIIa:P64,3) 199
- 5:13 Salary differences between educational qualifications in technical jobs (model II) and in commerce, finance and accounting (model VIII) 199
- 5:14 Job effects in technical work (model II:P64,3) 200
- 5:15 Job effects in commercial, economic and administrative jobs (model VIIIa:P64,3) 201
- 5:16 Interaction age \times education in research, experimentation and laboratory work (model IIIc:P64) 203
- 5:17 Interaction age \times job level in production supervision and control (model IIIb:P64) 204

5:18	Interaction age x job level in commercial jobs (model VIIIe: P64,1)	204
5:19	Interaction education x job level in commercial jobs (model VIIIe: P64,1)	205
5:20	Interaction education x job level in production supervision and control (model IIIb: P64)	206
5:21	Interaction education x job family in research experimentation and laboratory work (model IIIc: P64)	206

TABLES

2:1	Changes in the classification of identical male salary earners at the introduction on the third edition of the job classification system 1965/66	40
2:2	Response to the SAF salary statistics in 1956–1968	43
2:3	Response rate to the SER and SMR salary statistics in 1961–1970	44
2:4	Age distribution of the CF∩SAF, CF and SAF groups in 1970 (%)	46
2:5	The CF and SAF mean salary relative to the CF∩SAF mean salary in 1970 (percentage deviations)	46
3:1	Measures of changes in employment level and educational mix in 1957–1968	58
3:2	Educational composition in 1957–1968; all industries	59
3:3	Percentage distribution of employees by education and industry in 1968	60
3:4	Distribution by job families in 1956 and 1964; all educational qualifications	62
3:5	Educational composition by job families in 1968	63
3:6	Q and S measures of changes in educational composition in 1956–1964, by job families	64
3:7	Composition by job levels in 1956–1968; all educational qualifications	65
3:8	Educational composition by job levels in 1968	65
3:9	Q and S measures of changes in job levels in 1956–1968, by educational qualifications	66
3:10	Age distribution in 1956–1968; all educational qualifications	67
3:11	Changes in age mix by education in 1956–1968	67
3:12	Number of degrees and certificates awarded in 1954–1968	68
3:13	Leaving, employment and promotion rates for engineers in technical work	73
3:14	Leaving rates and employment rates by education in 1963 and 1964	75
3:15	Ranking of job families by turnover rate	76
4:1	Earnings paths for individuals with different periods of entry	81
4:2	Expected logarithmic cohort and cross section profiles generated by the prototype model (4:28)	86
4:3	Expected logarithmic salary path of a labour market cohort (b) with three birth cohorts	89
4:4	Expected logarithmic salary path of a birth cohort with three market cohorts	89
4:5	Number of young employees in 1954, 1956 and 1969	95
4:6	Semi-interquartile ranges of logarithmic salaries	99

4:7	Individual salary variability	100
4:8	Average age when a degree or certificate is obtained 1960–1970	108
4:9	Estimated salary profiles of graduate engineers specializing in electrical engineering (SER)	114
4:10	Estimated salary profiles of graduate engineers specializing in mechanical engineering (SMR)	115
4:11	Estimated physical age-salary profiles from SAF data	118
4:12	Selected labour market indicators in 1954–1969	123
4:13	Logarithmic residuals from estimated physical age-earnings profiles by education, physical age and time in 1954–1969	124
4:14	Estimated lifetime salaries by education	126
4:15	Relative rates of return to education	128
5:1	Expected logarithmic salaries	155
5:2	Number of employees by education and job	155
5:3	Educational main effects	155
5:4	Differences between effects estimated under the constraints 2 and 4	173
5:5	Factor ranges when model VIh:P64 is estimated under different constraints	173
5:6	Estimates of model IX:H68 (all men with at least high school education in 1968)	175
5:7	Salary ranges by factor	176
5:8	F-ratios by factor	177
5:9	Differences between the estimates of model IV and the models Va–Ve; Pairs in 1964	182
5:10	Differences between the estimates of model II and model IIIa; Pairs in 1964	183
5:11	Age effect differences (per year) estimated from models II:H68 and VIIIa:H68, with and without the job factor	185
5:12	Adjusted ranges and F-ratios for interactions in the models VIa–VIj	191
5:13	Interactions cost of living area \times industry in model Vg:P64	191
5:14	Adjusted ranges of interactions in model VII	196
5:15	F-ratios for interactions	196
5:16	Comparisons between estimates of model I obtained from Leavers in 1963, Pairs in 1963–1964 and Beginners in 1964	208
5:17	Factor ranges from model II and model VIIIa in 1957–1968	210
5:18	Differences between years in estimates of model II and model VIIIa	212
