

TABLE OF CONTENTS

FOREWORD	11
PREFACE	12
Chapter 1. INTRODUCTION	15
1.1 Background of the study	15
1.2 Scope of the study	16
1.3 General outline of the study	17
Chapter 2. ECONOMIC ACTIVITIES AND THE ENVIRONMENT	19
2.1 The concept of environmental quality	19
2.2 The nature of production and consumption activities	20
2.3 The allocation of environmental services	24
2.3.1 The market mechanism and environmental quality management	24
2.3.2 Public environmental quality management	26
2.3.2.1 General theory of environmental quality management	26
2.3.2.2 Environmental management models	34
2.4 Technological options for environmental quality control	44
2.5 Policy options for environmental quality control	47
2.5.1 Regulative measures	47
2.5.2 Economic incentives	49
Chapter 3. PRINCIPLES FOR OPTIMIZATION OF THE LEVEL OF EMISSION CONTROL	52
3.1 Data requirements for optimization of emission control levels	54
3.2 Cost impact analysis	55
3.3 Cost concept used in the study	58
3.4 Measurement problems	63
3.5 Characteristics of the data used in the present study	65

Chapter 4.	ENVIRONMENTAL POLICY IN SWEDEN	72
4.1	The Environment Protection Act	72
4.2	National physical planning	74
4.3	The act on products hazardous to man and to the environment	77
4.4	Government subsidization of emission control investments	77
Chapter 5.	EMISSION CONTROL IN THE SWEDISH IRON AND STEEL INDUSTRY BETWEEN JULY 1, 1969 AND JUNE 30, 1973	80
5.1	Basic facts about the Swedish iron and steel industry	80
5.1.1	Size and composition of output	80
5.1.2	Size and geographical distribution of plants	83
5.1.3	Size of total emissions	84
5.2	Technical characteristics of iron and steel production	86
5.2.1	General description of production processes	86
5.2.1.1	Preparation of raw materials	88
5.2.1.2	Raw iron manufacturing	88
5.2.1.3	Raw steel manufacturing	90
5.2.1.4	Finishing of steel products	93
5.2.2	Raw residual loads in the Swedish iron and steel industry	98
5.2.2.1	Preparation of raw materials	98
5.2.2.2	Raw iron manufacturing	99
5.2.2.3	Raw steel manufacturing	100
5.2.2.4	Finishing of steel products	103
5.2.2.5	Auxiliary operations	107
5.2.2.6	Summary	107
5.2.3	Base level of emission control in the Swedish iron and steel industry	107
5.2.3.1	Preparation of raw materials	107
5.2.3.2	Raw iron manufacturing	109
5.2.3.3	Raw steel manufacturing	109
5.2.3.4	Finishing of steel products	110
5.2.3.5	Summary	110
5.3	Technical efficiency and costs of emission control measures undertaken between July 1, 1969 and June 30, 1973	110
5.3.1	Coking	110
5.3.2	Sintering	112
5.3.3	Raw iron manufacturing	114
5.3.4	Raw manufacturing	116

5.3.5	Hot forming	118
5.3.6	Manufacturing	118
5.3.7	Summary and conclusions	123
Chapter 6.	EMISSION CONTROL IN THE SWEDISH PULP AND PAPER INDUSTRY BETWEEN JULY 1, 1969 AND JUNE 30, 1973	133
6.1	Basic facts about the Swedish pulp and paper industry	133
6.1.1	Size and composition of output	133
6.1.2	Size and geographical distribution of plants	133
6.1.3	Size of total emissions	135
6.2	Technical characteristics of pulp and paper production	137
6.2.1	General description of production processes	137
6.2.1.1	Preparation of raw materials	139
6.2.1.2	Pulping	139
6.2.1.3	Bleaching	140
6.2.1.4	Pulp handling and paper production	141
6.2.1.5	Recovery of chemicals	142
6.2.2	Raw residual loads in the Swedish pulp and paper industry	144
6.2.2.1	Preparation of raw materials	144
6.2.2.2	Pulping	145
6.2.2.3	Bleaching	146
6.2.2.4	Pulp handling and paper production	146
6.2.2.5	Recovery of chemicals	147
6.2.2.6	Summary	148
6.2.3	Base level of emission control in the Swedish pulp and paper industry	152
6.3	Technical efficiency and costs of emission control measures undertaken between July 1, 1969 and June 30, 1973	153
6.3.1	Preparation of raw materials	153
6.3.2	Pulping	153
6.3.3	Bleaching	155
6.3.4	Recovery of chemicals	155
6.3.5	Auxiliary operations	158
6.3.6	Summary and conclusions	160
Chapter 7.	THE USE OF COST IMPACT ANALYSIS	172
7.1	Recapitulation of the objective of the study	172
7.2	Assessment of some of the macro-economic effects of emission control investments in Swedish industry between July 1, 1969 and July 1, 1973	173

7.2.1	Distribution of emission control investments among industries	174
7.2.2	Distribution of emission control investments among regions	176
7.2.3	Distribution of emission control investments over time	176
7.2.4	The effects of employment on the emission control investments undertaken during the periods of increased subsidies	181
7.2.5	The effects on discharges of the subsidized emission control investments between July 1, 1969 and July 1, 1973	181
7.2.6	Tentative evaluation of the subsidization scheme	183
7.3	Conclusions	185

Appendix A.	CLASSIFICATION OF ENVIRONMENTAL CONTROL MEASURES	187
Appendix B.	CLASSIFICATION OF UNIT OPERATIONS IN IRON AND STEEL PRODUCTION	195
Appendix C.	CLASSIFICATION OF UNIT OPERATIONS IN PULP AND PAPER PRODUCTION	207

FIGURES

2:1	A materials balance view of the economy	23
2:2	Model for optimization of the level of environmental quality	27
3:1	Damage and treatment costs for alternative concentrations of residuals	53
3:2	Marginal damage and marginal treatment costs for alternative concentrations of residuals	54
5:1	Percentage of steel ingot production by different processes 1963-1973	82
5:2	Geographical distribution of the Swedish iron and steel industry	85
5:3	Principal processing steps of iron and steel production	87
6:1	Pulp and paper industry	136
6:2	Principal processing steps in pulp and paper production	138
7:1	The counties of Sweden	178
7:2	Distribution of emission control investment over time 1969-1974	179
7:3	Emission control investments and subsidies over time 1964-1974	180

TABLES

- 3:1 A schematic illustration of the format used for organizing the data 66
- 5:1 Swedish steel ingot production by processes 1968-1973 81
- 5:2 Size distribution of the Swedish steel plants in 1968 and 1973 83
- 5:3 Estimated annual emissions of particulates, SO₂, and suspended solids from the iron and steel industry 1969 and 1973 86
- 5:4 Range of variation for raw residual loads from iron and steel production in Sweden 108
- 5:5 Median levels of residuals discharges from Swedish iron and steel plants 111
- 5:6 Efficiency and cost of reducing particulate emissions from sintering units at Swedish iron and steel plants 113
- 5:7 Efficiency and costs of measures to reduce discharges from blast furnace gas cleaning units at Swedish iron and steel plants 115
- 5:8 Efficiency and costs of measures to reduce particulate emissions from Basic Oxygen Furnaces at Swedish steel plants 119
- 5:9 Efficiency and costs of measures to reduce particulate emissions from Electric Arc Furnaces at Swedish steel plants 120
- 5:10 Efficiency and cost of measures to reduce particulate emissions from Open Hearth Furnaces at Swedish steel plants 121
- 5:11 Efficiency and costs of measures to reduce discharge of water-borne residuals from hot forming shops 122
- 5:12 Summary of costs and effects of the emission control measures undertaken by the Swedish iron and steel industry between July 1, 1969 and July 1, 1973 124
- 5:13 Estimated cost impact on the Swedish iron and steel industry of Swedish environmental policy up to July 1, 1973 126
- 5:14 Estimated cost impact of July 1, 1973 emission control measures on major product categories 127
- 5:15 Annual costs of reducing particulate emissions of Swedish iron and steel plants between July 1, 1969 and July 1, 1973 129
- 5:16 Annual costs of reducing discharges of suspended solids at Swedish iron and steel plants between July 1, 1969 and July 1, 1973 130
- 5:17 Total annual costs of emission control measures undertaken at Swedish iron and steel plants between July 1, 1969 and July 1, 1973 132
- 6:1 Swedish pulp production 1969-1973 134
- 6:2 Size distribution of pulp plants in Sweden 1973 134

- 6:3 Estimated annual emissions of BOD₇, suspended solids, particulates and SO₂ from the pulp and paper industry 1969 and 1973 135
- 6:4a Range of variation of raw residual loads at Swedish sulphate pulp mills 149
- 6:4b Range of variation of raw residual loads at Swedish sulphite pulp mills 150
- 6:4c Range of variation of raw residual loads at Swedish mechanical/ semi-chemical pulp mills 151
- 6:5 Efficiency and cost of bark dewatering units in the raw materials preparation stage at Swedish pulp mills 154
- 6:6 Efficiency and costs of measures to reduce discharges of waterborne residuals from the bleaching operations at Swedish pulp mills 156
- 6:7 Distribution of emission control costs between various processes within the chemicals recovery sector 159
- 6:8 Summary of costs and effects of the emission control measures undertaken by the Swedish pulp and paper industry between July 1, 1969 and July 1, 1973 161
- 6:9 Estimated cost impact on different types of pulp by the "best practicable technology" requirement 164
- 6:10 Annual costs of reducing discharges of waterborne residuals at individual Swedish pulp and paper mills 165
- 6:11 Total annual costs of emission control measures undertaken at Swedish pulp and paper plants between July 1, 1969 and July 1, 1973 169
- 6:12 Average cost per ton of pulp of emission control measures undertaken at Swedish pulp and paper plants between July 1, 1969 and July 1, 1973 for major plant categories 171
- 7:1 Capital expenditures and subsidies for emission control measures by plants in operation before July 1, 1969 175
- 7:2 Regional unemployment rates 1971-73. Regional distribution of investment costs for emission control purposes and regional distribution of government subsidies 177
- 7:3 Distribution of direct employment effects of increased subsidies for emission control investments by plants in operation before July 1, 1969 182
- 7:4 Estimated reductions of discharges by emission control investments undertaken between July 1, 1969 and July 1, 1973 184
