## **General Introduction**

### **Part 1: Urban Search-Matching**

Introduction Part 1

#### **Chapter 1: Simple Models of Urban Search-Matching**

1.1. Introduction

1.2. The benchmark model

1.2.1. Urban land use equilibrium

1.2.2. Steady-state equilibrium

1.2.3. Interaction between land and labor markets

1.2.4. Welfare and efficiency

1.3. Search effort as a function of distance to jobs

1.3.1. Urban land use equilibrium

1.3.2. Steady-state equilibrium

1.3.3. The role of space in search-matching model

1.3.3.1. Interaction between land and labor markets

1.3.3.2. Decomposition of unemployment

1.3.4. Welfare

1.3.4.1. Welfare comparison between the two cities

1.3.4.2. Welfare within each city

1.4. Endogenous search intensity and housing consumption

1.4.1. The model

1.4.2. The different urban land use equilibria

1.4.3. Classification of equilibrium land use patterns

1.4.4. The steady-state labor equilibrium

1.4.5. The core-periphery steady-state equilibrium

1.5. Discussion

1.5.1. Fixed-housing consumption

1.5.2. Gathering information about jobs

1.6. Non-technical summary and notes on the literature

#### **Chapter 2: Extensions of Urban Search-Matching Models**

- 2.1. Introduction
- 2.2. Training costs
- 2.3. Relocation costs
  - 2.3.1. Positive relocation costs
  - 2.3.2. Very-high relocation costs
- 2.4. Leisure choices
- 2.5. Non-technical summary and notes on the literature

### **Chapter 3: Non-Monocentric cities and Search-Matching**

- 3.1. Introduction
- 3.2. Migration
- 3.3. Dual labor markets
- 3.4. Endogeneous formation of monocentric cities
- 3.5. Workers' and firms' heterogeneity with multi-job centers
- 3.6. Non-technical summary and notes on the literature

## **Part 2: Urban Efficiency Wages**

Introduction Part 2

### **Chapter 4: Simple Models of Urban Efficiency Wages**

4.1. Introduction

4.2. The benchmark model

4.2.1. Urban land use equilibrium

4.2.2. Steady-state equilibrium

4.2.3. Interaction between land and labor markets

4.3. Endogenous housing consumption

4.3.1. Urban land use equilibrium

4.3.2. Steady-state equilibrium

4.3.3. Closed-form solutions

4.3.4. Interaction between land and labor markets

4.4. City structure

4.4.1. Urban land use equilibria

4.4.2. Steady-state equilibrium 1: The employed live close to jobs

4.4.3. Steady-state equilibrium 2: The unemployed live close to jobs

4.4.4. Comparison between the two equilibria

4.5. Long-run equilibrium with free entry

4.6. Non-technical summary and notes on the literature

### **Chapter 5: Extensions of Urban Efficiency Wage Models**

5.1. Introduction

5.2. Effort as a function of distance to jobs

5.2.1. Firms do not observe the residential location of all workers

5.2.2. Firms perfectly observe the residential location of all workers

5.3. Effort and leisure

5.3.1. The model

5.3.2. Firms do not observe the residential location of all workers

5.3.3. Firms perfectly observe the residential location of all workers

- 5.4. Relocation costs
  - 5.4.1. Firms do not observe the residential location of all workers
  - 5.4.2. Firms perfectly observe the residential location of all workers
  - 5.4.3. Comparison between the two equilibria
  - 5.4.4. Free entry and long-run equilibrium
- 5.5. Effort, leisure and relocation costs
  - 5.5.1. Firms do not observe the residential location of all workers
  - 5.5.2. Firms perfectly observe the residential location of all workers
- 5.6. Non-technical summary and notes on the literature

## **Chapter 6: Non-Monocentric Cities and Efficiency Wages**

- 6.1. Introduction
- 6.2. Rural-urban migration: The Harris-Todaro model with a land market
  - 6.2.1. The urban-land use equilibrium
  - 6.2.2. The labor equilibrium in cities
  - 6.2.3. The rural-urban migration
  - 6.2.4. The equilibrium
  - 6.2.5. Comparative statics and the Todaro paradox
  - 6.2.6. The specificity of a Harris-Todaro equilibrium with a land market
- 6.3. Migration between cities of different sizes
  - 6.3.1. Urban land use equilibrium in each city
  - 6.3.2. Steady-state equilibrium
  - 6.3.3. Interaction between land and labor markets
- 6.4. Migration within cities: Dual labor markets in a duocentric city
  - 6.4.1. The model with a fixed SBD
  - 6.4.2. Urban land use equilibrium
  - 6.4.3. Labor market equilibrium
  - 6.4.4. Steady-state equilibrium
  - 6.4.5. Interaction between land and labor markets
  - 6.4.6. First extension: The case of high relocation costs
  - 6.4.7. Second extension: Endogenous formation of the SBD
- 6.4. Endogenous formation of monocentric cities with unemployment
  - 6.5.1. The model

6.5.2. Urban land use equilibrium

6.5.3. Steady-state equilibrium

6.6. Non-technical summary and notes on the literature

## **Part 3: Urban Ghettos and the Labor Market**

Introduction Part 3

### **Chapter 7: The spatial mismatch hypothesis.**

7.1. Introduction

7.2. An efficiency wage perspective

7.2.1. Adapting the benchmark urban efficiency wage model

7.2.2. Theory of spatial mismatch 1: The firms' perspective

7.2.3. Theory of spatial mismatch 2: The workers' perspective

7.3. A search-matching approach

7.2.1. Adapting the benchmark urban search model: Access to job information and different search intensities

7.2.2. Different entry costs and search frictions

7.2.3. Different transport modes and search frictions

7.4. Non-technical summary and notes on the literature

### **Chapter 8: Labor market networks in cities**

8.1. Introduction

8.2. Social networks as externalities

8.3. Social networks as dyads

8.4. Social networks as graphs

8.5. Non-technical summary and notes on the literature

### **Chapter 9: Racial prejudices and cultural transmission in cities**

9.1. Introduction

9.2. Oppositional identities and urban segregation

9.3. Self-fulfilling racial prejudices in cities

9.4. Peer effects and ghetto culture

9.5. Non-technical summary and notes on the literature

## **General conclusion**

## **Appendix**

Appendix 1: Basic urban economics

Appendix 2: Dynamic programming and the derivations of the Bellman equations

Appendix 3: The Harris-Todaro model
