

## CONTENTS

List of Figures		xi
List of Tables		xii
Foreword		xiii
<b>PART I THEORY</b>		
<b>Chapter I</b>	<b>The Economics of Innovation, Coordination, Selection, and Knowledge Transfer</b>	<b>3</b>
I.1	The Experimentally Organized Economy	3
I.2	The Business Information Problem -- Can the Mind of the Firm be Automated?	6
I.3	The Firm as a Financial Decision Unit	7
I.4	The Firm as a Competence Organization	8
I.5	How Do Different People Look at Business?	9
I.6	How to Manage Bigness Efficiently?	11
I.7	The Accounts of the Knowledge-Based Information Economy	12
I.8	The Necessity of Tacit Competence	14
I.9	The Limits of Reason	16
I.10	The Flora of Knowledge -- a Note on Terminology for the Business Information System	18
I.11	Why This Study?	21
<b>Chapter II</b>	<b>The Organization of Production, Markets and Administrative Control Systems -- A General Theory of Innovation and Information, or the Experimentally Organized Economy</b>	<b>23</b>
II.1	From the Classical to the Experimental Organization of the Economy	24
II.2	The Large Investment Opportunity Set	26
-	Diminishing returns to learning prevent fully informed decisions	27
-	The opportunity set grows from being exploited -- the Särinner effect	27
-	The limits of learning	28
II.3	Tacit Knowledge, Free Entry and Technological Competition	29
II.4	Optimal Social Organization in the Experimentally Organized Economy	30

II.5	The Capital Market and Dynamic Economic Coordination -- Closing the Smith-Schumpeter-Wicksell System	31
-	How to operate out of equilibrium?	31
-	What bounds an economy out of equilibrium? -- the endogenous invisible hand	32
-	The capital market as the ultimate controller	33
-	Competence and competition set the limits	34
II.6	The Three Axioms of Knowledge (behavior) -- Proving the Existence of Tacit Knowledge -- Excursus on Theory	34
-	The three axioms of knowledge	35
-	The limits of analytical methods	35
-	The impact of tradition on modes of decision making	36
II.7	Empirical Evidence on the Experimentally Organized Economy	37
-	A generalized Salter curve analysis of innovative behavior and enforced competition	37
-	The very large productivity potential	41
-	Innovative entry is the key to macro dynamics	42
-	The four change mechanisms of economic growth	44
-	Unpredictability in the Swedish micro-to-macro model	46
-	Following a sample of firms for some 60 years	47
-	Not even very large firms live for ever	47
-	Which firms are innovative?	51
<b>Chapter III</b>	<b>The Firm as an Experimental Machine -- Its Decision Problem</b>	<b>53</b>
III.1	The Competence Specification of a Business Organization	54
III.2	The Main Functions of a Business Organization	57
-	The hierarchy as a conduit of information and authority	58
-	Efficient information transfer requires a stable internal language	59
-	Internally disturbing, innovative organizational change has to be decided by teams organizationally separated from routine management	60
III.3	Knowledge as a Scale Factor	61
-	Mathematical excursus	62
III.4	The Depreciation of Knowledge	64
III.5	The Creation of Dominant Knowledge	65

III.6	Selection of the Team	67
III.7	A Stylized Career Model of the Firm	67
III.8	The Valuation and Compensation of Dominant Industrial Competence	69
III.9	Objectives of the Market and Incentives of the Top Competent Team	71
III.10	The Value of Ownership	75
III.11	The firm as a Locus of Financial Objectives	76
	- Defining the rate of return	76
	- The control function of the firm	78
	- The organization and the separable additive targeting system	78
III.12	The Valuation of Capital	80
III.13	Profits and Productivity Change	83
III.14	Productivity Change through Organizational Change	
	-- interior productivity performance	83
III.15	Profit Margins and Productivity	84
	- A breakdown of the profit accounts	84
	- The virtually unlimited ways to reorganize production for improved efficiency	85
	- Connecting rates of return and total factor productivity advance	86
III.16	What Does It Mean to Be Rational?	87
III.17	The Theory and the Reality of the Firm	90
	- The firm and the market	91
	- Experiments, uncertainty and risktaking	92
	- Firm dynamics, competition and macro behavior	93
	- The business problem as part of theory	94
	- Different images of a firm -- a systematic overview	97
	a) A converter of uncertainty into computable risks -- the Knight (1921) proposition	100
	b) The firm as a manager of financial risks	102
	c) Bounded rationality, financial markets and the optimal managerial span of control	103
	d) Behavioral and managerial theories of the firm	106
	e) The firm as a competent team and organizational learner	108
	f) The firm as an experimental machine	110
	Mathematical Appendix; Proof of the relationship between the rate of return and total factor productivity change	114

<b>PART II</b>	<b>PRACTICE</b>	
<b>Chapter IV</b>	<b>The Firm -- Its Control System in Practice</b>	<b>119</b>
IV.1	What is Done within a Firm?	119
IV.2	Selection and the Breeding of a Competent Corporate Culture	121
	- The varied career	122
	- The specialist	124
	- The internal educational and training system	125
IV.3	Creation of New Knowledge	127
IV.4	Coordination	128
IV.5	Organizational Learning	130
IV.6	Representing the Flows of Activity through the Cost Accounts	131
	- Information access vs. control	132
	- The cost accounts	138
	- The cost and profit control hierarchy	138
IV.7	Four Common Information Systems Biases	141
	Rate of return requirements on invisible capital -- missing items	141
	The illusory profit boom of 1974 -- biased measures	144
	Excessive caution in discounting	146
	Wrong measures	147
<b>Chapter V</b>	<b>The Universal Information System -- a Fantasy or a Feasible New Product?</b>	<b>149</b>
V.1	Introduction	149
V.2	The nature of the universal information product	151
V.3	Artificial intelligence versus organizational control -- the purpose of information designs	154
V.4	Conclusions on the Universal Business Information System (UBIS)	159
<b>Chapter VI</b>	<b>The Experimental Evolution of a New Information Product</b>	<b>161</b>
VI.1	The practical features of the information product	162
	Monitoring and overview	162
	Monitoring and automation	164
	The access feature	165
	Organizing people	166
VI.2	The production of information services	167
VI.3	Electronically distributed services and outsourcing	169
VI.4	The experimental emergence of a new, universal business information systems (UBIS) product	172

	a)	The IBM-story -- trying it all	175
	b)	The Xerox-story -- beginning too early	191
	c)	The DEC-story -- good, but not good enough	192
	d)	The ERICSSON story -- the high ambitions, the early rise and the final collapse of the Swedish computer industry	194
VI.5		The new information product -- summing up	199
VI.6		The many technologies that have to be merged in the universal business information product	204
	-	The product idea -- the experimental evolution of a new technology combination	204
	-	The management task -- integrating at least nine fundamentally different technologies	206
VI.7		The emergence of the elements of the new information product	207
	-	How should a business information system designed for the experimentally organized economy look?	213
	-	The access feature	214
	-	Receiver competence	216
	-	Making users of the business information system hostages of the systems developer's knowledge	217
	-	Revealing proprietary user knowledge to the information systems supplier	218
VI.8		Summary conclusions about the new information product	219

**PART III    A CHRONICLE OF EVENTS THAT MARK  
THE EXPERIMENTAL EVOLUTION OF A NEW  
INFORMATION PRODUCT**

<b>Chapter VII</b>	<b>Systems Components and the New Information Product Defined</b>	225
	Introduction	225
	Sources of the Chronicle	228
	Classification of technologies	229
	From hardware, via software to netware and the lap top	232
	Deregulation saved the U.S. IT industry	232
	The core technologies upon which most UBIS's attempts have been based	233
	Enormous technological variety ....	234
	.... turns conventional truths upside down	234
	Technology Wars	235
	Standardization and "commodization"	236
	Technological Locking-in	236

	The three dominant structural changes	237
	The access feature	238
	Lessons for policy makers	239
<b>Supplement 1</b>	<b>Office automation and business information systems market -- announcement of entry</b>	243
<b>Supplement 2</b>	<b>Spin-off, start-up and major innovations chronology</b>	245
<b>Supplement 3</b>	<b>Interviewed firms</b>	251
	Subject index	253
	Bibliography	257

*Appended as diskette*

**A Chronicle of Events that Mark the Experimental Evolution of a New Information Product**

Systems Components and the New Information Product Defined

The Content of the Business Information System

-- A Classification of Technologies

- A Representation of the Business
- B Analysis, Data Processing
- C Communications
- D User Contacts
- E Applications

## LIST OF FIGURES

II.1	Salter curve structures illustrating the dynamics of the Swedish micro-to-macro model	38
	A. Rate of return distributions in Swedish manufacturing industry, 1983 and 1990	38
	B. Labor productivity distributions in Swedish manufacturing, 1983 and 1990	39
	C. The productivity frontier of one firm, first quarter 1983	40
II.2	The share of Swedish manufacturing output of <i>Stora</i> 1340-1988	48
II.3	Survival rates in a sample of firms	48
III.1	Levels of decision making within a business organization	59
III.2	Excess returns to capital and effective rates of return -- Swedish manufacturing 1951-1988	74
III.3	The firm in the markets	95
IV.1	Distribution of labor costs on functions	120
IV.2	Gross profit margins 1950-1992 in Swedish manufacturing according to different definitions	145
V.1	The integrated information and control system of a firm	151
VI.1	The integrated business information system	202
VII.1	Early entrants into the business and office information markets	230

## LIST OF TABLES

I.1	The statistical accounts of the knowledge-based information economy	13
II.1	The four mechanisms of economic growth	45
II.2	The very old, large Swedish firms	49
II.3	The ten largest Swedish manufacturing corporations	50
III.1	Competence specification of the experimentally organized firm	56
III.2	Main operational tasks of a manufacturing firm	58
III.3	The firm as a local jurisdiction (rule system)	95
III.4	Three types of financial functions performed internally in the firm and externally in markets	104
IV.1	The organizational hierarchy of a firm -- information access	134
IV.2	Functions and hierarchies as viewed through the cost accounts of a firm	136
IV.3	Balance sheets of the largest Swedish manufacturing corporations 1985 and 1988 including intangible capital	143
VI.1	The office machine market	189
VI.2	Market shares 1965 in U.S. computer market	189
VI.3	From vacuum tubes to semiconductors -- the ten largest producers	190
VI.4	Functional orientation of hardware and software development	202
VI.5	Layers of communication	203
VI.6	The technology elements of the new information systems product	203
VI.7	The critical design technologies	204
VII.1	The content of the business information system -- a classification of technologies	235
